Abstract

In our project, on "Hotel Management System" , we have tried to show how the Data/information in hotel is managed .This is just an overview of management in hotel. This has been achieved by dividing the project into various modules.Customer is provided with different services like checking-in checking out ,and editing entries or can be advance payments etc.If the customer wants he/she can cancel his/her booking.Enquire about any customer or employee can be made either by customer id or customer name.Enquire about room available can also be made .Our project also includes a module for employee information.It will generate reports for customers , employees and bill for customer is generated when the customer will checkout from the hotel.we have included only few modules, as our purpose is to only have an idea or to study about the how the management is done in the hotel.By adding many more modules this type of project can be scope in various hotels.
